

Growth Recovers After Early Stumble; Investors Take on Increased Risk

[Listen to Monthly Insights](#)

Main Points

Growth claimed the top spot on August's Factor performance board. The Growth trade stumbled out of the gate to start August but recovered ground to outperform value by +6%. Growth has now outperformed Value for eleven consecutive months due in large part to its Tech OW and Financials UW. However, the Growth trade faces pressures ahead. Following its +43% LTM return, Growth's NTM implied return is only +5%, which is the lowest among all factors (**Figure 7**). From a valuation composite perspective, Large Cap Growth trades nearly +3std above its historical valuation composite average (**Figure 9**). (Note: For reference, ~99.7% of values would be expected to fall within 3std in a normal dataset. Large Cap Growth's current valuation is at an extreme level.) Balancing all of this out is a lack of inflation, unprecedented Fed stimulus, and historically low interest rates. The options are not very exciting: expensive equities or low yields. Right now, most investors are making the choice to hold expensive equities. The party cannot go on forever, but Fed Chair Powell keeps extending last call.

With Large Cap Growth's dominance, it's easy to forget there are other factors. Momentum was the second best performing factor in August. We maintain our OW for now, but watch out for the Health Care OW heading into the presidential election. Low Volatility and Quality each provided unique datapoints in August. Low Volatility has the most defined dispersion among its deciles as the more volatile deciles outperformed lower volatility deciles (**Figure 32**). Within Quality, the lowest quality decile significantly outperformed the 9 higher quality deciles (**Figure 39**). Both datapoints suggest investors are increasingly comfortable taking on risk, which is broadly positive from a market sentiment and rally duration perspective.

Multifactor Pulse: We noticed a split forming in Tactical and Strategic ETF positioning. Tactical ETFs are positioned more aggressively: 15% Financials and only 5% Consumer Staples and 3% Utilities. Strategic ETFs are less aggressive: only 9% Financials and 9% Consumer Staples and 6% Utilities. Refer to page 5 for the full details.

Factor Roundup

- **Growth:** 11 consecutive months of outperformance over Value (**Figure 17**); Concerns about Growth's expensive valuation (**Figure 9**)
- **Momentum:** Blended EPS vs Russell 1000 remains strong (**Figure 49**); Top decile outperformance highlights momentum trend (**Figure 46**)
- **Large Caps:** Stronger fundamentals compared to Small Caps; Tech OW is a performance tailwind in current market (**Figure 28**)
- **Low Volatility:** Worst performing factor in August (**Figure 3**); Russell 1000 y/y approaching +1std, indicating potential selloff (**Figure 36**)
- **Quality:** Bottom quality decile outperformance suggest risk taking (**Figure 39**); HY-IG credit spread continues to compress (**Figure 43**)
- **MDR Factor Model Portfolios:** Growth portfolios continue to underperform due to Tech constraint; 2Q20 earnings impact returns

MarketDesk Factor Ratings: The goal of this report is to simplify factor investing by focusing on the key drivers of risk and return. Below is a summary of our factor allocation views for the next 12 months. Up / down arrows indicate a positive (▲) or negative (▼) change in view since the prior monthly report.

● Underweight (UW) ● Neutral (N) ● Overweight (OW)

Equity Factor	Allocation View				Performance (%)			Asset Flows (%)			Rationale
	Chg	UW	N	OW	1M	6M	1Y	1M	6M	1Y	
U.S. Factors — Core Areas											
Growth		•	•	●	10.2	36.4	44.0	-2.0	-0.4	0.3	Consistently outperforms among factor groupings; Watch out for Tech sector OW
Low Volatility		•	•	●	2.8	2.4	-1.2	-1.4	-12.3	-3.5	Blended EPS held up vs Russell 1000 during selloff; Offers second highest yield at second lowest valuation
Momentum		•	•	●	9.5	27.9	28.7	3.6	-5.0	-8.0	Blended EPS gap vs Russell 1000 holding steady during selloff; Health Care OW is a risk heading into 2020 election
Size - Large		•	•	●	7.0	19.2	21.9	-0.4	0.8	4.2	Less volatile blended EPS growth than Small Caps; Stronger fundamentals than small caps
Size - Small		•	●	•	5.5	7.0	5.9	0.1	0.4	2.4	Potential upgrade in near-term, but risk / reward not favorable after rally; U.S. exposure a plus amid U.S.-China tensions
Quality		•	●	•	6.9	18.1	20.2	-1.5	7.0	50.2	Similar sector exposure to S&P 500; Prefer to use Growth for broad market exposure
Value		•	●	•	4.1	2.1	0.8	0.3	1.1	5.7	Low valuations provide a buffer late cycle, but Value ETFs do not provide good "Value" exposure

Asset Flows = 5 largest ETFs for each category. Total net flows are divided by total beginning of period assets.

Proprietary Indicator

September 1, 2020

The MDR Multifactor Pulse is a proprietary indicator built by MarketDesk Research to highlight portfolio shifts within the multifactor ETF universe. Multifactor ETFs use rules-based methodologies to offer investors diversified exposure across multiple investment factors. From a methodology perspective, multifactor ETFs can be classified as either tactical or strategic. *Tactical* multifactor ETFs take a near-term view and rotate opportunistically between factors on a relative basis. (Tactical ETFs: OMFL, OMFS, MFUS, DYNF, FEX, FNX, FYX, TUSA, RFFC.) *Strategic* multifactor ETFs use a long-term approach to select investment factors. (Strategic ETFs: SCIU, GSLC, FLQL, JHML, JPUS, ROUS, QUS, DEUS, USMF, LRGF.) The figures below highlight how tactical and strategic multifactor ETF portfolios are positioned. The data is calculated by pulling down holdings each month and analyzing factor and sector exposures.

Tactical ETFs (short-term)

Allocation	Current	m/m%	y/y%
Quality	21%	0.1%	-0.9%
Momentum	19%	0.1%	-0.4%

Style Factor

Value vs Growth

Monthly Report

September 1, 2020

Growth and Value are often considered direct opposites, despite measuring different traits. Growth identifies companies experiencing above average growth rates, while Value identifies companies with below average valuations based on a variety of metrics. Not all Growth stocks are expensive, and not all Value stocks are low growth. Growth tends to underperform during rising inflation, because it depends more on future earnings.

FIGURE 16: Industries Ranked by Style

Growth is based on blended EPS Growth (LTM & NTM). Value is based on NTM P/E. Note: The far left column shows the 1-month change in each industry's rank.

Growth Industries	EPS Growth	NTM P/E
▲ 1 Specialty Telecom	239%	20.3x
▲ 3 Steel	154%	60.5x
▲ 1 Auto Parts	124%	42.0x
▲ 9 Medical Services	93%	107.6x
▲ 3 Precious Metals	84%	23.9x
- Marine Shipping	83%	7.1x
- Engineering/Construction	81%	15.2x
▲ 3 Automobiles	81%	104.8x
▲ 1 Auto Aftermarket	73%	32.7x
▲ 2 Biotech	58%	62.9x
▲ 3 Internet Retail	45%	94.6x
▲ 22 Oilfield Services/Equip	32%	6.3x
▲ 14 Forest Products	27%	21.1x

Value Industries	EPS Growth	NTM P/E
▲ 1 Oil Refining	-9%	5.0x
▲ 3 Oilfield Services/Equip	32%	6.3x
▲ 1 Life/Health Insurance	2%	6.9x
▲ 9 Marine Shipping	83%	7.1x
▲ 3 Drugstore Chains	0%	8.1x

FIGURE 22: Value Factor Outperformance & U.S. Inflation

Size Factor

Small vs Large

The Size factor groups companies into Large-Cap, Mid-Cap, and Small-Cap based on market capitalization. Smaller companies tend to be more volatile with less mature business models and greater earnings volatility. However, smaller companies also tend to experience higher growth rates. Figure 29 compares the relative Small/Large performance gap against the U.S. ISM Manufacturing Index. Smaller companies tend to benefit from a rising ISM Manufacturing Index.

FIGURE 23: Industries Ranked by Size

The average industry size is based on weighted average market cap in USD billions. Note: the far left column shows the 1-month change in each industry's rank.

Large Cap Industries			Avg Mkt Cap	# Cos
-	Telecom Equip		2,036	30

Low Volatility Factor

vs Russell 1000

Low Volatility is a defensive factor that measures companies based on their movement relative to the overall market. Low Volatility companies generally move less than the market, which means the factor tends to outperform during market drawdowns. Figure 36 charts the year-over-year rolling return, which is important to monitor as recent outperformance can lead to future underperformance / drawdown risk.

FIGURE 30: Industries Ranked by Volatility

Below industries are ranked by 3-Year standard deviation of weekly industry returns. The 3-Year correlation is compared to the S&P 500.

Low Vol Industries	3Yr Correl	3Yr Std
- Food: Specialty/Candy	0.70	2.4%
- Household Durables	0.70	2.6%
- Pharma: Major	0.74	2.7%

Quality Factor

vs Russell 1000

Monthly Report

September 1, 2020

The Quality factor highlights companies with strong fundamentals, such as higher profitability, low debt, and stable earnings growth. Due to their strong fundamentals, higher quality companies are viewed as better able to weather economic downturns. Figure 43 charts the gap between high-yield (HY) and investment grade (IG) OAS spreads. A wider HY OAS spread indicates investors are more concerned about debt defaults and lower quality companies.

FIGURE 37: Industries Ranked by MDR Quality Score

Below industries are ranked by the MDR Quality Score which takes into consideration debt to capital, return on assets, return on equity, operating and net margins.

High Quality Industries	This Month	Last Month
- Railroads	8.7	8.7
- Home Improvement	8.0	8.0
- Insurance Brokers	7.1	7.1
- Airlines	7.0	6.9

FIGURE 41: Relative Valuation Composite (QUAL vs Russell 1000)

FIGURE 43: Relative Credit Option Adjusted Spread (HY vs IG)

Momentum Factor

vs Russell 1000

The Momentum factor analyzes companies based on recent price performance. Stronger performance tends to mean higher momentum. Due to its intense focus on recent price performance, Momentum exposure can change drastically. Therefore, it is important to understand what factors are embedded in Momentum at any one time. Figure 50 charts the relative performance of the top 3 momentum sectors by weight against the bottom 3 momentum sectors by weight.

FIGURE 44: Industries by 3-Month Momentum

Below industries are ranked as "high" or "low" Momentum based on their 3-month returns. Note: the far left column shows the 1-month change in each industry's rank.

High Momentum	3mo Return	1Y Return

Performance Summary

September 1, 2020

The **MDR Factor Model Portfolios** are quantitatively managed across four core areas (Quality, Value, Growth and Income) for both the Russell 1000 and Russell 2000 universes. The goal is to achieve superior risk adjusted returns over well-known factor ETFs. The models incorporate two important risk controls. First, the quantitative process removes companies with weak financial health metrics. Second, all portfolios have a sector weight limit of 20%. While the sector constraint can create significant sector exposure differences, we believe it is an important risk control. Portfolio changes are published on a monthly basis. The below descriptions provide additional information on each factor model portfolio.

FIGURE 51: Summary of MDR Factor Model Performance

Model Portfolios	Absolute Performance			vs Benchmark			# of New Holdings	Commentary
	1-Month	6-Month	1-Year	1-Month	6-Month	1-Year		
Russell 1000 Universe — Large Cap Model Portfolios								
Large Cap Quality (p.12)	4.7%	21.9%	25.5%	-1.1%	+5.0%	+8.0%	16	
Large Cap Value (p.13)	5.0%	17.0%	28.2%	+1.0%	+14.9%	+27.4%	21	Higher turnover as model continues to find quality companies at attractive valuations

Small Cap Quality (p.16)	3.4%	18.6%	17.4%	-2.1%	+11.6%	+11.5%	15	Investors preferred lower quality companies as markets reached all-time highs
Small Cap Value (p.17)	1.5%	18.1%	33.5%	-3.8%	+21.9%	+39.8%	23	2Q20 earnings impact relative performance
Small Cap Growth (p.18)	2.6%	12.6%	17.1%	-3.2%	-2.8%	-0.2%	21	
Small Cap Income (p.19)	3.5%	-9.7%	-10.8%	+0.1%	-3.2%	+0.4%	7	

Note: Portfolios are updated each month-end. Performance is based on total returns across equal-weighted portfolios. Returns prior to March 2020 are quantitatively back tested. **Past performance doesn't guarantee future results.**

MDR Quality Portfolios

- **Goal:** Highlight quality companies with superior financial strength
- **Quant Screen:** U.S. companies with positive sales and EPS growth over the past three years (e.g. indicates company is growing). Companies are assigned a quality ranking based on key balance sheet and income statement metrics. The top 50 companies are equal-weighted.
- **Large Cap Benchmark:** iShares U.S. Quality Factor ETF (ticker: QUAL)
- **Small Cap Benchmark:** iShares Russell 2000 ETF (ticker: IWM)

MDR Growth Portfolios

- **Goal:** Highlight quality companies growing faster than their peers
- **Quant Screen:** U.S. companies with a forecasted EPS growth rate above the benchmark over the next two years. Companies are ranked based on their growth rate. The top 50 companies are equal-weighted.
- **Large Cap Benchmark:** iShares Russell 1000 Growth ETF (ticker: IWF)
- **Small Cap Benchmark:** iShares Russell 2000 Growth ETF (ticker: IWO)

MDR Value Portfolios

- **Goal:** Highlight companies temporarily trading below their long-term valuation average
- **Quant Screen:** U.S. companies with positive sales and EPS growth over the past three years (e.g. indicates company is growing). Companies are ranked based on how they trade relative to their historical valuation levels. The top 50 companies are equal-weighted.
- **Large Cap Benchmark:** iShares Russell 1000 Value ETF (ticker: IWD)
- **Small Cap Benchmark:** iShares Russell 2000 Value ETF (ticker: IWN)

MDR Income Portfolios

- **Goal:** Highlight companies with the potential for above average income generation
- **Quant Screen:** U.S. companies with a dividend yield greater than 3.5%. Remaining companies are assigned a quality ranking based on key balance sheet and income statement metrics. The top 50 companies (based on the quality score) are equal-weighted.
- **Large Cap Benchmark:** SPDR Russell 1000 Yield Focus ETF (ticker: ONEY)
- **Small Cap Benchmark:** Russell 2000 Dividend Growers ETF (ticker: SMDV)

Important Notices & Disclaimer

MarketDesk is wholly-owned by MarketDesk Research, LLC ("MarketDesk Research" or "MDR"). The information and opinions expressed herein are solely those of MDR, are provided for informational purposes only and are not intended as recommendations to buy or sell a security, nor as an offer to buy or sell a security. Recipients of the information provided herein should consult with a financial advisor before purchasing or selling a security. MDR is not an investment advisor and is not registered with the U.S. Securities and Exchange Commission or the Financial Industry Regulatory Authority, and, further, the owners, employees, agents or representatives of MDR are not acting as investment advisors and might not be registered with the U.S. Securities and Exchange Commission. The information and opinions provided herein are provided as general market commentary only, and do not consider the specific investment objectives, financial situation or particular needs of any one client. The information in this report is not intended to be used as the primary basis of investment decisions, and because of individual client objectives, should not be construed as advice designed to meet the particular investment needs of any investor. The comments may not be relied upon as recommendations, investment advice or an indication of trading intent. MDR is not soliciting any action based on this document. Investors should consult with their own financial adviser before making any investment decisions. There is no guarantee that any future event discussed herein will come to pass. The data used in this publication may have been obtained from a variety of sources including U.S. Federal Reserve, FactSet, Bloomberg, Bank of America Merrill Lynch, iShares, Vanguard and State Street, which we believe to be reliable, but MDR cannot be held responsible for the accuracy of data used herein. Any use of graphs, text or other material from this report by the recipient must acknowledge MarketDesk Research as the source. Past performance does not guarantee or indicate future results. Investing involves risk, including the possible loss of principal and fluctuation of value. MDR disclaims responsibility for updating information. In addition, MDR disclaims responsibility for third-party content, including information accessed through hyperlinks.

MDR is not a registered investment adviser. No mention of a particular security, index, derivative or other instrument in the report constitutes a recommendation to buy, sell, or hold that or any other security, nor does it constitute an opinion on the suitability of any security, index, or derivative. The report is strictly an information publication and has been prepared without regard to the particular investments and circumstances of the recipient. SUBSCRIBERS SHOULD VERIFY ALL CLAIMS AND COMPLETE THEIR OWN RESEARCH AND CONSULT A REGISTERED FINANCIAL PROFESSIONAL BEFORE INVESTING IN ANY INVESTMENTS MENTIONED IN THE PUBLICATION. INVESTING IN SECURITIES AND DERIVATIVES IS SPECULATIVE AND CARRIES A HIGH DEGREE OF RISK, AND SUBSCRIBERS MAY LOSE MONEY TRADING AND INVESTING IN SUCH INVESTMENTS.

Principals of MDR may or may not hold or be short any of the securities, options, or futures discussed in the report, or any other securities, at any time.
